WHAT'S NEW IN PANDORA FMS 7.0 NG 711

The latest Pandora FMS update package is already available to download.

Some of the most important changes are listed below:

Problems solved

- * Export of the user's personalized graph to CSV. Only the data from the first graph used to be shown, now all series are shown.
- * Creation of SNMP v2c modules through the CLI (Command Line Interface).
- * Creation and editing of report templates in Metaconsole, which used to be there since the 709 package.
- * Renewal of license when expired, due to the problems originated when this was not done through the Admin User.
- * Elements placed in Visual Console, some text labels had lost the format in patch 709. In addition, a text label that appeared below the graphic has been removed.
- * Migration script from version 6 to the current one. a small problem in the backup procedure, when loading through the source command, has been fixed.
- * In the "Label" field, macros in the report templates of the metaconsole were not working.
- * SQL error when viewing log4x type data in detailed mode.
- * When launching a graph from the event viewer, if the module contained spaces in the name, a white screen appeared.
