

Administration

[Go back to Pandora FMS documentation index](#)

We are working on the translation of the Pandora FMS documentation. Sorry for any inconvenience.

Administration

The *Advanced* section contains the Metaconsole administration options, between them:

- The data synchronization between the Metaconsole and the Instances
- The data management of the Metaconsole
- The licence management of the Metaconsole
- The Metasetup where there are:
 - The Instances configuration
 - The Metaconsole configuration options

In this chapter we are going to talk about the Metasetup and the licence management, in the next chapter we will describe in detail the synchronization and data management of the Metaconsole.

Instance Configuration

In the Metasetup section, besides all the options of the console configuration, there is a tab for the console Setup.

In this tab, we will select the instances. All the configuration process is available at the manual section [Install and Configure](#)

Synchronising	User management	Agent management	Module management	Alert management	Event alerts	Component management	Policy management	Category management	Server management	Licence	Metasetup

Metaconsole Configuration

In the Metasetup section we find tabs with the Metaconsole configuration different options:

General Configuration

In this section we find general data of the Metaconsole, such as the language, the date/hour configuration or customization about some sections, among others.

It is possible to customize if we want that the Netflow section would be enabled or disabled, the tree view classified by tags, the visual console and the possibility of web checks creation from the Wizard.

The screenshot displays the 'Basic' configuration page in the Pandora FMS Metaconsole. The top navigation bar includes tabs for Synchronising, User management, Agent management, Module management, Alert management, Event alerts, Component management, Policy management, Category management, Server management, Licence, and Metasetup (which is active). Below the navigation bar is a toolbar with various icons. The main content area is divided into several sections:

- Language settings:** English (UK) (dropdown)
- Auto login (hash) password:** (text input)
- Time source:** System (dropdown)
- Enforce https:** Yes No
- Centralized management:** Yes No
- Attachment directory:** /var/www/html/pandora_console/attachment (text input)
- Phantomjs bin directory:** /usr/bin (text input)
- Timezone setup:** Europe/Madrid (dropdown)
- Public URL:** (text input)
- Disable custom live view filters:** Yes No
- Command line snapshot:** Yes No

The **Customise sections** section features two columns:

- Disabled sections:** A list box containing 'None'.
- Enabled sections:** A list box containing 'Netflow', 'Tree view by tags', 'Visual Console', and 'Web Checks'.

Other settings include:

- API password:** (password input)
- IP list with API access:** 127.0.0.1 (text input)
- Activate reset password:** Yes No
- Enable update manager:** Yes No

An 'Update' button with a refresh icon is located at the bottom right of the configuration area.

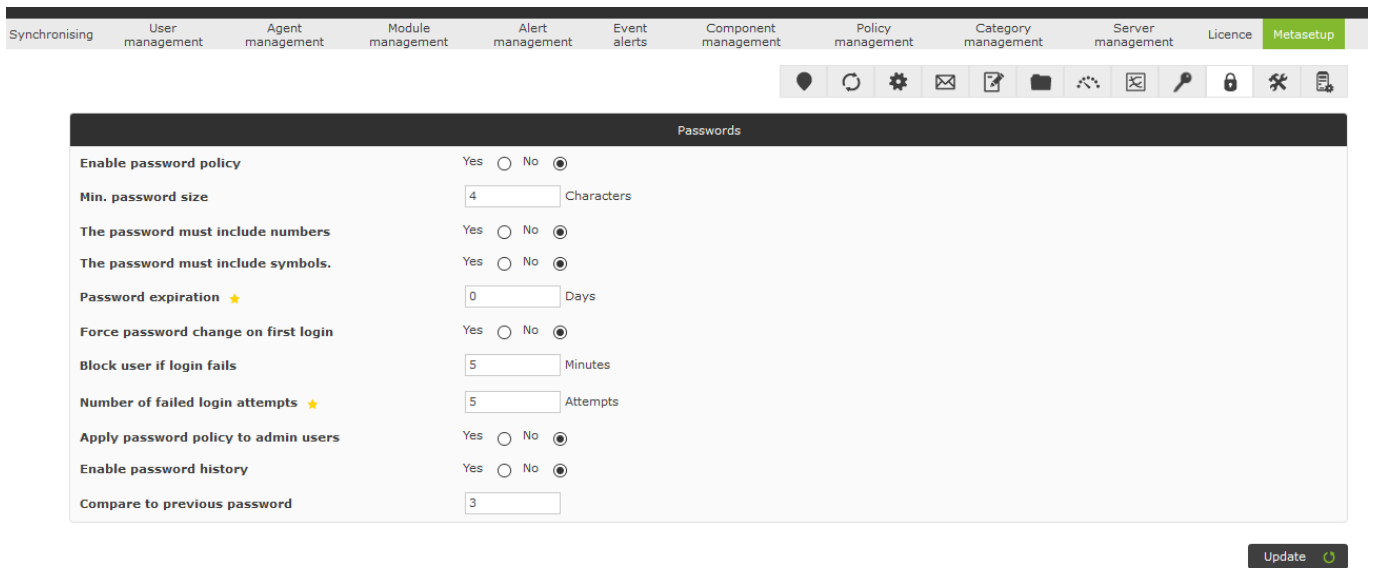

The parameters that require explanation are:

- **Centralized Management:** This option allows us to centrally manage policies and events from Metaconsole, without being able to manage them from the nodes.
- **Enable update manager:** This option allows us to activate both the “Offline update manager” and the “Online update manager”, which allow us to update the Metaconsole in this configuration.

Password Policy

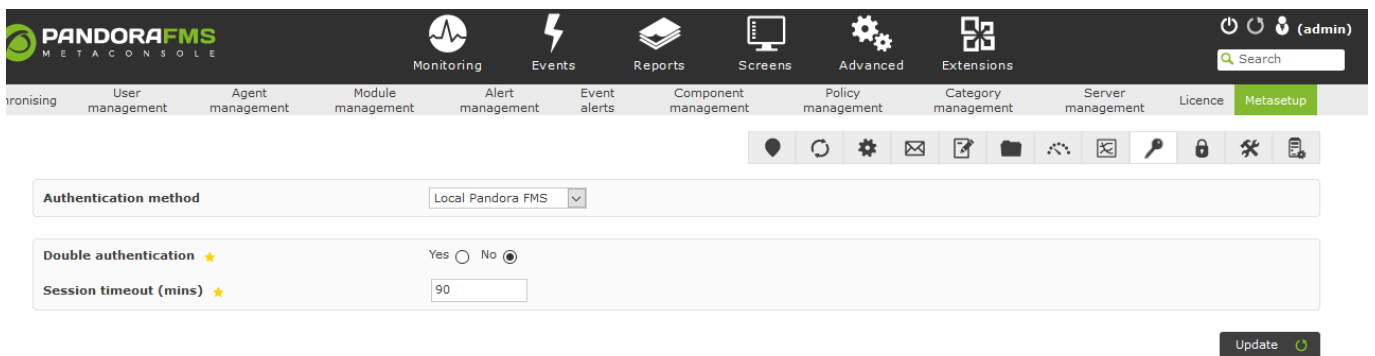

It is possible to set a password policy with limitations in the password number of characters,

expiration, temporary blocking of one user. To know more about the password policy go to the manual section [Password policy](#)

Authentication

To know more about the authentication go to the manual section [Authentication](#).

Visual Configuration

All configuration related to the data representation. Colors and graph resolution, number of items in the view pagination, etc. You can see more information about the visual configuration in this [link](#).

Visual

Date format string ?	Example September 14, 2018, 11:35 am <input type="text" value="F j, Y, g:i a"/>
Timestamp or time comparison ?	Rollover comparison <input checked="" type="radio"/> Timestamp in rollover <input type="radio"/>
Graph color #1	<input type="text" value="#99dd00"/>
Graph color #2	<input type="text" value="#336600"/>
Graph color #3	<input type="text" value="#3399cc"/>
Data precision for reports and visual consoles ★	<input type="text" value="1"/>
Percentile ★	<input type="text" value="0"/>
Value to interface graphics	<input type="text" value="Bytes"/>
Block size for pagination	<input type="text" value="20"/>

Title 1 (login)	<input type="text"/>
Title 2 (login)	<input type="text"/>
Docs URL (login)	<input type="text"/>
Support URL (login)	<input type="text"/>
Font path	<input type="text" value="smallfont.ttf"/>
Show report info with description ★	<input checked="" type="checkbox"/>
Front page for custom reports ★	<input type="checkbox"/>
Visual effects and animation	Yes <input checked="" type="radio"/> No <input type="radio"/>

Performance

Visualization options, historic, event purging and maximum size of blocks in the data migration.

Performance

Max. days before delete events

Active events history ? Yes No

Max. days before audited event cleanup

Default hours for event view

Migration block size

Update

File Management

File manager where it is possible to upload and delete the files from the images folder from the Metaconsole installation.

The Metaconsole code re-uses some images from the normal console code. These images will be not accessible form this manager and it will be necessary to get to the installation manually to manage them.

i This directory is read-only

String Translation

With the string translation feature it is possible to customize translations.

We do a search of the string in the language that we want to customize. The original string will be shown, the translation to that language and a third column to write the customized translation.

Original string	Translation in selected language (es)	Customize translation
Report generating on the Enterprise version is also more powerful; it has wizards, you can schedule emails in PDF to be sent according to the schedule you decide, and it has a template system to create personalized reports quickly for each of your customers. It will even allow your customers to generate their own reports from templates created by you. If reports are key to your business, Pandora FMS Enterprise version is for you!	La generación de informes en la versión Enterprise también es más potente: cuenta con asistentes, puede programar los correos electrónicos en PDF para que se envíen según el calendario que decida y tiene un sistema de plantillas para crear informes personalizados de manera rápida para cada uno de sus clientes. Incluso permitirá a sus clientes generar sus propios informes a partir de plantillas creadas por usted. Si los informes son clave para su negocio, la versión Enterprise de Pandora FMS es para usted.	
The Pandora FMS community wizard	Asistente de la comunidad Pandora FMS	

Email

Con la utilidad de mail podemos personalizar el envío de mails desde la metaconsola, donde deberemos de configurar la cuenta de mail con la que queremos enviar, por ejemplo, los informes generados.

From dir	<input type="text" value="pandora@pandorafms.org"/>
From name	<input type="text" value="Pandora FMS"/>
Server SMTP	<input type="text" value="127.0.0.1"/>
Port SMTP	<input type="text" value="25"/>
Email user	<input type="text"/>
Email password	<input type="password"/>

Update

Opciones Update Manager

En esta sección podemos modificar las opciones que se van a usar para el Update Manager. Por defecto viene ya configurado para poder realizar la actualización online. Esta sección solo será visible si tenemos activado el "Enable update manager".

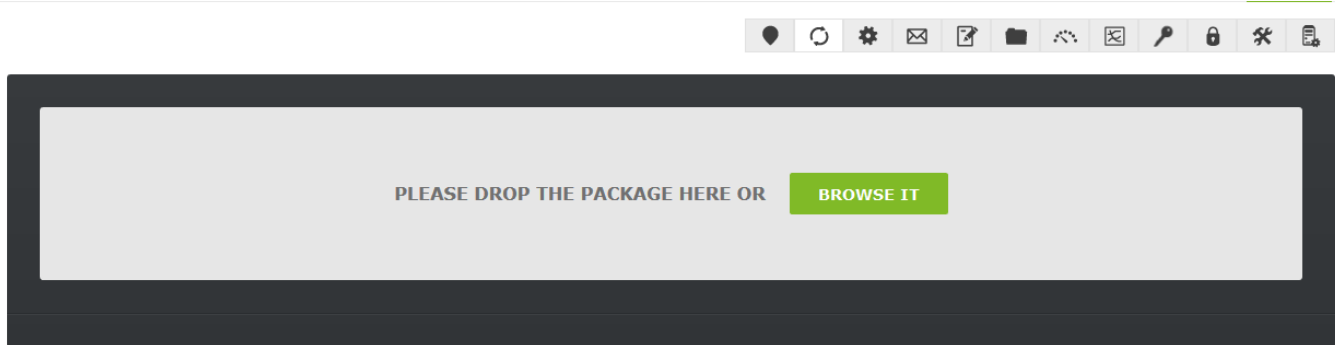

Update manager URL	<input type="text" value="https://licensing.artica.es/pandoraupdate7/server.php"/>
Proxy server:	<input type="text"/>
Proxy port:	<input type="text"/>
Proxy user:	<input type="text"/>
Proxy password:	<input type="password"/>

Update

Offline Update Manager

En esta sección podremos actualizar la metaconsola sin necesidad de conectarnos a ningún otro

lugar. Solo tendremos que subir los ficheros “rpm” en orden hasta la versión que queremos actualizar, dado que no son versiones acumulativas. Esta sección solo será visible si tenemos activado el “Enable update manager”.

Online Update Manager

En esta sección podremos actualizar la metaconsola de manera automática, solo tendremos que poseer una licencia válida de metaconsola y acceso a internet. Esta sección solo será visible si tenemos activado el “Enable update manager”.

The latest version of package installed is:

725
