

The Professional Solution for Remote Access to Servers and Workstations

The screenshot displays the Pandora RC interface. On the left, a card shows a 'Connected' status for 'Tech support machine #310', which is a Windows desktop located in HQ, San Francisco. It notes the last login was by Nichole Swanstaiger. Below this card is a 'Run agent' button and several icons representing different device types. On the right, a user profile for 'Nichole Swanstaiger' (Admin) is shown. Below the profile are two server configuration cards: 'Main Pandora RC server - London' (pandorafms.com/rc, 127.1.0.0, Default server) and 'Commercial zone #25 - Madrid'.

Pandora RC is a powerful remote access platform for Windows, Linux, and Mac servers and workstations.

It is available as both on-premise and SaaS solution and it is part of Pandora FMS suite, integrating natively to provide monitoring and instant remote access to all types of devices, regardless of their location.

Security and Flexibility into a **Single Solution**

With Pandora RC, you may access any device anywhere, without the need for VPNs or manual configurations. Its advanced authentication and encryption features ensure privacy in every login.

- ✓ Access from any browser without requiring additional software installation.
- ✓ Enhanced security with two-factor authentication and local passwords.
- ✓ A flexible infrastructure that adapts to multiple business environments, ensuring security and ease of deployment.

Easy Installation in Four Steps

1.

Sign up for Pandora RC for free, with up to 5 devices.

2.

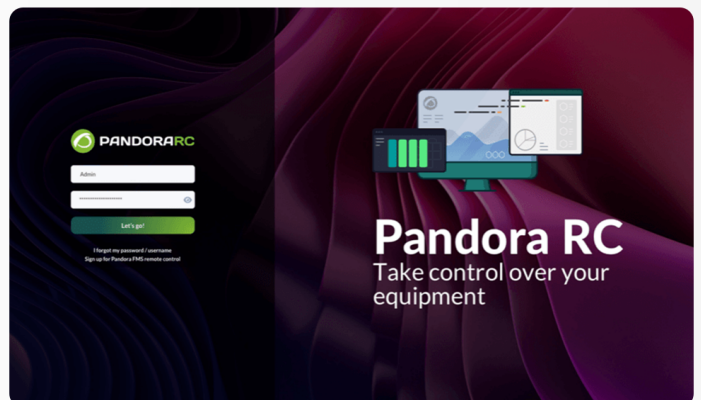

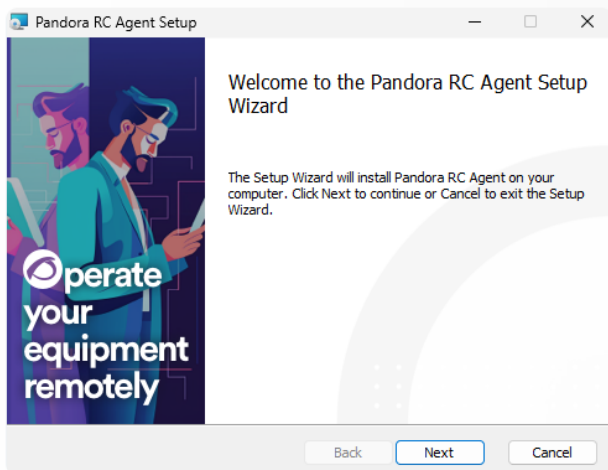

Download the software to manage remote access.

3.

Install the application on the devices you wish to control.

4.

Access the platform and start managing your devices.

Supported by **Multiple Systems**

Pandora RC supports different platforms, ensuring a simple and quick installation:

Windows

Standard installer and portable version.

Linux

It supports Debian, RPM (RedHat/Rocky), and generic tarball packages.

Raspbian

Support for ARM8 devices.

MacOS

Available in a stable version, with future optimized releases.

Advanced Features for **Total Control**

Pandora RC goes beyond traditional remote access. Its intuitive interface allows complete management of services, files, and sessions with full transparency and traceability.

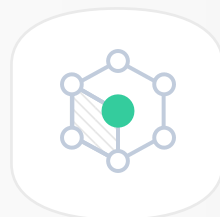

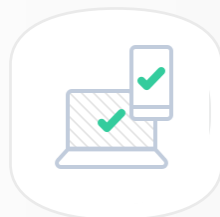

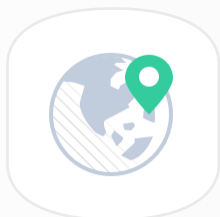

✓ Remote shell (CLI) access on Linux, Windows, and Mac for advanced tasks.

✓ Seamless remote desktop control.

✓ Comprehensive processes and service management with full visibility.

✓ Safe file transfer between devices.

✓ Automatic load balancing for maximum stability.

More Than Remote Access: Centralized Management

From Pandora RC console, you may monitor and manage hundreds of devices in a unified way. Whether for corporate IT, service providers, or MSPs, it enables optimized and efficient administration.

- ✓ Complete session auditing for regulatory compliance.
- ✓ Centralized management of permissions and access.
- ✓ Native integration with Pandora FMS for advanced monitoring.

On-Premise Infrastructure: Enterprise-Level Control and Security

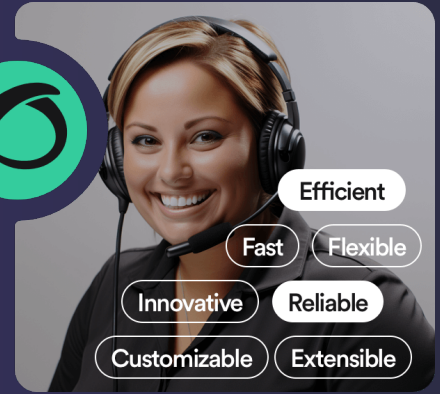

Designed for companies and environments that require maximum control over their infrastructure, the **On-Premise** version of Pandora RC ensures security and full autonomy:

- ✓ **Completely isolated infrastructure**, without reliance on external services.
- ✓ **Absolute control** over access, data, and security policies.
- ✓ **Regulatory compliance** ensured through access auditing and permission management.
- ✓ **Ideal for critical sectors**, such as finance, healthcare, and government.

Licensing Options

Pandora RC adapts to different business models, with options specifically designed for corporate environments and partners:

On-Premise

Full control with deployment in your own infrastructure.

SaaS

Immediate accessibility without managing infrastructure.

Scalable licenses

based on the number of devices or simultaneous users.
